

ASSA2003 data files for use with Branson's Cross Entropy Weights

The ASSA2003 data files included with the weights were created for the weights used in the [create.restriction.do](#) file. These were compiled from the ASSA 2003 model and the ASSA ProvOutput_051129 spreadsheets and are required if to rerun the weights files.

Note that the survey datasets should be in the format they were on the DataFirst website on 21 April 2009 in order to rerun these files.
